

> What is London Tramlink?

London Tramlink, part of Transport for London (TfL), manages the Capital's tram network. TfL acquired Tramlink in July 2008 after previously running the service through a concession contract. It is the only tramway system in the South East and provides passengers with frequent, reliable, comfortable and environmentally friendly journeys.

> What does it do?

Following the acquisition of Tramlink, TfL is able to better plan its future development and its integration into the transport network.

Extra services are now running to Beckenham and Elmers End (two to four trams per hour, Monday to Saturday evenings and all day on Sunday).

Also during 2008/09, all trams received a new livery and were deep cleaned inside and out. Tram stops were refurbished to provide better information and safety enhancements for

passengers. Further plans include track repairs, capacity enhancements and more improvements to security and policing on the system.

London's trams are easily accessible for parents with buggies, people with impaired mobility and those carrying luggage. Ticketing has also been simplified with Oyster pay as you go accepted on all tram lines.

> Key facts

- > Tramlink has 28km of track, 24 trams in the fleet and 39 stops
- > It serves seven mainline stations and 55 bus routes
- > More than 27 million passengers currently use the service every year
