

The Performance of London Buses Compared to Other World Cities

IBBG Phase 2020/2021 (2019 data summary)

September 2021

Imperial College London Projects TSC > Transport Strategy Centre

Fifteen Bus Benchmarking Group Member Cities; Seven Operators in the IBBG for 17 Years Now

Commercial Speed is a Key Driver of Performance

KPI Structure: Balanced Scorecard Approach

Key topics to measure how organisations perform against each other:

How occupied are the buses on our network?

Growth: % Change in Passenger Boardings and Vehicle Kilometres (2014-2019, 5 year change)

% Change in Over 5 Years in Passenger Boardings, Actual Revenue Vehicle km and Actual Revenue Vehicle Hours (2014-2019)

INTERNATIONAL BUS BENCHMARKING GROUP

 Note: International comparisons not advised due to known cultural bias INTERNATIONAL BUS BENCHMARKING GROUP

How do costs of running services compare?

How does the average fare per journey length compare?

Note: data available for 14 of the 15 members

How does the level of income generated vs. operated costs compare?

How does the collision rate compare?

Note: data available for 14 of the 15 members

How does CO2 emissions per passenger km compare?

Performance Dashboard (absolute): How Does London Buses Rank Relative to Other Group Members on Several Dimensions in 2019?

How does London perform against other members? Where does London do well and where do we need to improve?

need to improve?	KPIs	Worst Performer	25%	Median	75%	Best Performer	Ln	Total Count

INTERNATIONAL BUS BENCHMARKING GROUP

Concluding comments: London Buses Continue to be a Good Performer Against Peers, With Above Average Levels or Improving Trends in Many KPIs (1)

- Key Performance Driver Commercial Speed is Below Average, But has Improved Recently
 - Reduction in roadworks has helped average speed improve in the last three years
 - Bus speeds are now 10.1% below group average, affecting internal and relative performance
- Average Asset Utilisation and Good Availability:
 - Vehicle utilisation has dropped below the group average due to a reduction in boardings, but as speed and journey time variability improve, utilisation is expected to improve again.
 - London Buses performs the 6th best in terms of service availability, e.g. low lost vehicle kilometres.
- Good Financial Performance:
 - Service operating cost per revenue vehicle hour remains good, 6th lowest and 12% below group average.
 - 4th lowest subsidy requirement compared to other international peers, helped by relatively low operating cost and reasonable fares.

Concluding comments: London Buses Continue to be a Good Performer Against Peers, With Above Average Levels or Improving Trends in Many KPIs (2)

- Good Environmental Performance:
 - London performs 3rd best with the positive trend continuing. CO2 emissions per passenger km has significantly improved over the past years, especially since 2016, which is good given the reduction in passenger km.
- Vehicle collisions reduced, but more opportunity for improvement
 - 2019 saw continued reductions in collisions/km, a 10% drop compared to 2017 levels.
 - While collisions per vehicle km for London Buses remain 16% above IBBG's group average, the collisions per vehicle hour are now at the IBBG group average level. This is due to the relatively slow bus speeds in London compared to IBBG peers and hence less vehicle kilometres are produced for one vehicle hour.
 - London Buses has established a bus safety programme: <u>https://tfl.gov.uk/corporate/safety-and-security/road-safety/bus-safety</u> that was partly informed by lessons learned through the IBBG.
 - Safety is a key focus area for IBBG Members, including London Buses. The IBBG continues work on increased comparability and understanding of safety data, and continues to benchmark safety programs and policies to help improve safety in all IBBG member cities.
