

London Overground

London Overground interim signs standards

A Single line format - Preferred

Single line version. Size of square roundel field based around existing sign height, with remaining area displaying station name in accordance with standard.

For longer format fascias spaces to sides of station name increase accordingly:

B Multi-line format

For very short fascia formats the roundel should be centred on the sign height to maintain a balance with the text size.

Where a shorter sign format will result in small text height, a two (or three) line version should be used. Size of square roundel field based around existing sign height, with remaining area displaying station name.

C Vertical format

In the absence of space for a fascia sign a vertical format version may be used with station name below roundel in two lines if possible.

Application :

All station entrances to be surveyed to establish sizes of existing entrance signs. Where stations have several entrances, each sign must be covered. Where no entrance signing is present, a suitable position for a new sign should be established and measured.

Material :

Where signs are being fitted over existing steel or aluminum signs, or signs are being fitted to walls, composite aluminium panels with exterior grade vinyl graphic applied to front face prior to installation. Screw fix or rivet signs as required.

Where existing signs are flat acrylic, entire sign may be covered by vinyl overlay providing no evidence of old graphic or unsightly ridges are visible.

Where signs cannot be measured accurately, oversized vinyl overlays may be produced and cut on site

“Temporary sign” text to be in the proportions shown here.

Stage 2 station platform temporary signing

Version 5

The sizes of Silverlink signs seem to vary considerably so the sign maker will need to adjust the temporary sign size accordingly.
 The roundel area should whenever possible be to the height of the panel and the rest to suit as shown. In some circumstances this may not be possible as shown below in the examples B.

A Single line format

B Multi-line format

Examples of typical sign shapes

Size to cover up all Silverlink or other identification.
